

Migrate Teams Between Tenants with MigrationWiz

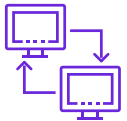

Autodiscover Teams: Analyze your existing Teams instance for all Teams and prepopulate a CSV for quick import into your project.

Manage Individual Teams: Add, edit, rename, and manage each Team as a separate line item for more granular project management.

Avoid Naming Conflicts: Limit project errors or unwanted merging by proactively identifying naming conflicts and altering the MailNickName prior to the cutover.

Pre-Stage Your Project: Just like mailbox projects, perform a pre-stage pass to migrate Teams and Channel structure before moving data.

Migrate in Parallel: Our autoscaling infrastructure allows for dozens of Teams to migrate concurrently, reaching over 500 Teams and more than half a terabyte per day.*

Forget Global Admin Credentials: By leveraging read-only Application Permissions for Teams, we enable a secure migration without use of Global Admin or Site Collection Admin permissions on source and destination.

*Average data transfer speeds based on internal testing and customer feedback. Actual migration speeds depend on several variables.

MigrationWiz - Collaboration

Only pay for the Teams you need to move.

- Forget counting users or data. With the Collaboration license, you only need as many licenses as Teams you are planning to migrate.
- With 100 GB data allowance per license, no files, conversations, or note is left behind. Ensure a full fidelity move to a new tenant.
