

Managed Detection & Response Services to Help You Deliver Expert Security to all Your Customers

24/7/365 MDR service that enables robust threat detection and response across the IT environments you manage. Our 24/7 Security Operations Center (SOC) Cyber Analysts are an extension of your team and will pick up the phone to provide immediate expertise, peace of mind, and hands-on assistance to remediate threats on your behalf when and where you need it.

Profitable

Increase Security

MSP-Ready

A Unified, Single Pane-of-Glass for Complete Visibility, Control, and Ease-of-Use

The SOCaaSP platform equips you with all the insights needed to deliver cybersecurity solutions tailored for each customer, offering complete visibility into their deployments, risks, actions, and overall status. It also features easy-to-use, efficient tools for managing incidents, responding to threats, and quickly implementing remediation.

- 24/7 SOC arms you to offer instant and effective threat detection and response
- End-to-end coverage – from endpoints to cloud workloads
- Unified, intuitive dashboard makes delivering cybersecurity a breeze
- Maximize value for your customers with extensive, detailed, and branded reporting
- Single-click deployment
- SOCaaSP gives organizations the platform, processes, and people to detect, respond to, and reduce security threats.
- Monitor for threats 24/7/365
- SOC-as-a-Service with 24/7 coverage
- Alert and respond in real-time
- Collaborate with security experts
- Simple deployment
- Drive more security service sales

Profitable and Easy

- Increase your MSP's value with new high impact low effort revenue stream
- Drastically improve your customers' security posture with revolutionary patented technology
- Reduce your costs by up to 30%
- Eliminate the need to address cybersecurity issues for your customers (we take care of it for you)
- No cybersecurity expertise required
- Zero upfront commitment – pay as you go
- Extremely easy-to-use interface that makes it a breeze to deploy and manage cybersecurity
- The only managed SOC provider that does not charge for incident response
- Full SIEM included, AI-assisted SOC team at your disposal 24/7/365
- White-labeling brings faster time-to-market, reduced costs, expert support, and enhanced credibility

SOC-as-a-Service

SOCaaS provides visibility and administration of all the valuable cybersecurity services you can offer your customers all built to work together with click-of-a-button access and execution.

Xcitium's MSP-optimized Unified Zero Trust Platform – SOCaaSP empowers you with a SOC as a Service that includes:

- Managed Detection & Response
- Extended Detection & Response including endpoints & networks
- Next-gen Antivirus
- Patented ZeroDwell Virtualized Execution Technology
- Cloud Native Application Protection Platform
- Security Information & Event Management
- Web protection
- Advanced threat detection leveraging AI, automation, & human analysis
- 24/7 security monitoring
- Remote monitoring & management
- Incident response – at no additional cost
- Shared intelligence throughout the Platform

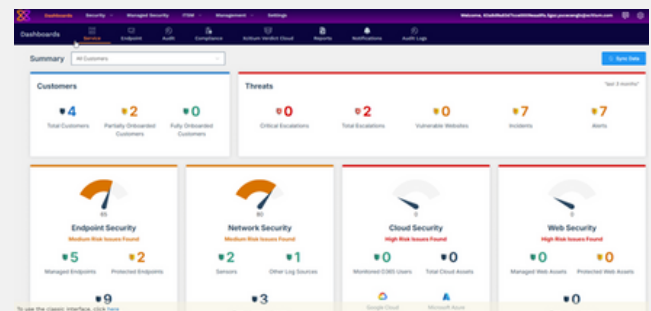

Unparalleled Visibility and Control

The SOCaaSP Dashboard provides a wealth of information on security and threat status, cybersecurity, incident response, and customer information as well as one-click management and execution including:

- Total Customer Count and onboarding status
- Total Endpoint Count including enabled offerings
- Network Security Status
- Office 365 Accounts Connected
- Total Incidents, Alerts, and Reports

White-Label SOC Offerings

- **Custom Branding:** The SOC services, including reports, notifications, and customer-facing materials, can be branded with your logo and identity.
- **Comprehensive Threat Management:** Leverage Xcitium's advanced threat containment, zero-trust architecture, and managed SOC services to protect clients from cyber threats.
- **Scalability:** MSPs can scale their services without investing in the infrastructure or personnel required to build and manage a SOC.
- **Seamless Integration:** SOCaaSP integrates with existing tools and platforms used by MSPs, ensuring minimal disruption to workflows.
