

Securely adopt Copilot with confidence

You may already be exploring how Microsoft Copilot could help improve productivity and unlock greater value from your Microsoft 365 tools. But we understand that alongside the opportunity can come important questions around security and governance.

That's why we take a security-first approach; it's the key to confident AI adoption.

Common AI concerns

- Could sensitive information be overshared?
- Is our existing security strong enough?
- How do we stay compliant as AI adoption grows?
- Do we have visibility into our data and permissions?
- How can we adopt AI safely without adding risk?

These questions shouldn't be a barrier to AI adoption – but the foundations for implementing it right.

How we help you adopt AI securely

We build the secure foundations needed to introduce Copilot safely and confidently within your existing Microsoft 365 environment. Combining technologies, we create a workplace that is both productive and protected.

Microsoft Entra

Helps strengthen identity and access controls through Multi-Factor Authentication, Conditional Access, and identity governance.

Microsoft Purview

Helps you understand, classify and protect sensitive data with Information Protection, Data Loss Prevention, and compliance capabilities.

Microsoft Defender

Provides integrated protection across users, devices, email, identities, and applications to help reduce cyber risk.

What this looks like in practice

Safer collaboration

Work confidently across Microsoft 365 while reducing the risk of oversharing sensitive information.

Better visibility and control

Understand where sensitive data lives and who can access it before scaling AI adoption.

Secure productivity

Unlock AI-powered productivity while maintaining strong security and compliance controls.

Take the first step

AI adoption doesn't have to feel risky or overwhelming. With the right security foundations in place, you can move forward with greater confidence and control.
